

```
1. //Place this plugin snippet into another file in your applicationb
2. (function ($) {
3.     $.toggleShowPassword = function (options) {
4.         var settings = $.extend({
5.             field: "#password",
6.             control: "#toggle_show_password",
7.         }, options);
8.
9.         var control = $(settings.control);
10.        var field = $(settings.field)
11.
12.        control.bind('click', function () {
13.            if (control.is(':checked')) {
14.                field.attr('type', 'text');
15.            } else {
16.                field.attr('type', 'password');
17.            }
18.        })
19.    };
20. }(jQuery));
21.
22. //Here how to call above plugin from everywhere in your application document body
23. $.toggleShowPassword({
24.     field: '#test1',
25.     control: '#test2'
26. });
```

html

1. Password:
2. `<input type="password" id="test1" value="a" />`
3. `<input id="test2" type="checkbox" />Show password`
